

AZHAN HASHMI

Full Stack Developer

📞 9250829331 | ✉ azhanhashmi788@gmail.com | 🔗 LinkedIn | 🌐 GitHub

EDUCATION

KCC Institute Of Technology and Management, Greater Noida

Expected Jun 2026

Bachelor of Computer Application | Relevant Coursework: Data Structures, Object-Oriented Programming, Database Management Systems, Web Development, Java GUI Development

Senior Secondary (CBSE) – NP Co-ed Sr Sec School, Delhi

Apr 2020 – Mar 2022

Class 12th

Secondary (CBSE) – NP Co-ed Sr Sec School, Delhi

Apr 2018 – Mar 2020

Class 10th

PROJECTS

AI Assistant – Vector Engine | React, Node.js, C++, Rag, Ollama | 🌐 GitHub

May 2026

- Implemented **HNSW (Hierarchical Navigable Small World)** vector search from scratch in C++ – custom multi-layer graph traversal, approximate nearest neighbor retrieval, and dynamic node insertion/deletion without any third-party vector database.
- Architected a **Node.js bridge** that spawns the C++ engine as a persistent child process, communicating through stdin/stdout pipes – achieving sub-millisecond similarity queries across the full backend without shared library overhead.
- Integrated **Ollama** locally for text embedding (nomic-embed-text) and answer generation (LLaMA 3.2) – fully offline, zero API cost, with a confidence-threshold fallback routing weak matches to general model knowledge.
- Designed **multi-format ingestion** supporting PDF parsing, configurable chunking with overlap, and batch processing enabling semantic recall across uploaded documents, personal notes, and structured knowledge files.
- Built a **React frontend** featuring a D3.js force-directed graph that maps stored knowledge nodes, illuminates retrieved chunks per query, and surfaces source similarity scores alongside every generated response.

Am I Hireable? – AI Developer Profile Analyzer | React, TypeScript, Node.js, Groq AI | 🌐 Live | 🌐 GitHub

Apr 2026

- Developed a **full-stack analyzer** that fetches real **GitHub and LeetCode data** via REST and GraphQL APIs, processes 15+ developer signals, and produces a brutally honest hiring readiness report through **Groq LLaMA 3.3 70B** inference.
- Engineered a **custom signal processing pipeline** that detects tutorial repos, measures commit consistency across months, and evaluates DSA readiness – all structured into a prompt feeding a dual-mode scoring model.
- Shipped a **dual-mode scoring system** (Startup vs Product Company) across 3 company tiers – Google/Microsoft, Zepto/Razorpay, and Funded Startups – each with distinct scoring categories and India-specific 2025 hiring benchmarks.
- Deployed backend on **Render** and frontend on **Vercel** with environment-based CORS, production config, and **Google Search Console** indexing – live with real users discovering the tool organically.

InceptaX – AI Based Challenges & Project Platform | React, Node.js, MongoDB | 🌐 Live | 🌐 GitHub

Apr 2026

- Architected a **3-interface platform** from scratch – user portal, admin panel, and backend API – each independently deployable, handling challenge participation, project submissions, and leaderboard management under one system.
- Replicated a **hackathon-style evaluation flow** where users browse industry-style challenges, submit solutions, and get ranked – giving beginners a structured competitive environment that mirrors real hiring assessments.
- Launched a **dual-ranking system** combining per-challenge leaderboards with an aggregated overall score, driving consistent participation – user surveys confirmed **5–8 hours saved** per project cycle on average.
- Followed **WCAG accessibility guidelines** across all three interfaces, ensuring the platform remains usable for developers with varying needs – not treated as an afterthought but built in from the start.

TECHNICAL SKILLS

Frontend Development: React.js, JavaScript, HTML, CSS, Tailwind CSS, Redux, TypeScript

Backend Development: Node.js, Express.js, REST GraphQL APIs, JWT, Firebase, Groq / LLM integration

Databases: MongoDB, NoSQL, MySQL, PostgreSQL, Data Modeling, Schema Design, Database Optimization

Web Development: Cross-Browser Compatibility, Single Page Applications Search Engine Optimization (SEO)

Tools & Technologies: Git, GitHub, Vercel/Render, Cloudinary, VS Code
